Question 1 Correct	Coders here is a simple task for you, you have given an array of size <b>N</b> and an integer <b>M</b> .
Marked out of 1.00	Your task is to calculate the difference between maximum sum and minimum sum of N-M elements of the given array.
₹ Flag question	Constraints:
	1<=t<=10
	1<=n<=1000
	1<=o(i)<=1000
	Input:
	First line contains an integer T denoting the number of testcases.
	First line of every testcase contains two integer N and M.
	Next line contains N space separated integers denoting the elements of array
	Output
	For every test case print your answer in new line
	SAMPLE INPUT
	1
	51
	12345
	SAMPLE OUTPUT
	SAMPLE OUTPUT
	4
	Explanation
	M is 1 and N is 5 so you have to calculate maximum and minimum sum using (5-1 =) 4 elements.
	Maximum sum using the 4 elements would be (2-3-4-4-5=)14.
	Minimum sum using the 4 elements would be (1+2+3+4-1)10.
	Difference will be 14-10=4.

	Input	Expected	Got	
,	1	4	4	1
	5 1			
	12345

Question 2 Correct Marked out of 1,00	A new deadly virus has infected large population of a planet. A brilliant scientist has discovered a new strain of virus which can cure this disease. Vaccine produced from this virus has various strength depending on midichlorians count. A person is cured only if midichlorians count in vaccine batch is more than midichlorians count of person. A doctor receives a new set of report which contains midichlorians count of each infected patient. Practo stores all vaccine doctor has and their midichlorians count. You need to determine if doctor can save all patients with the vaccines he has. The number of vaccines and patients are equal.
∜ Flag question	Input Format
	First line contains the number of vaccines - N. Second line contains N integers, which are strength of vaccines. Third line contains N integers, which are midichlorians count of patients.
	Output Format
	Print a single line containing 'Yes' or 'No'.
	Input Constraint
	1 < N < 10
	Strength of vaccines and midichlorians count of patients fit in integer.
	SAMPLE INPUT
	5
	123 146 454 542 456
	100 328 248 689 200
	SAMPLE OUTPUT
	No

Answer: (penalty regime: 0 %)

```
1 |Winclude(stdio.h>
 2 int main()
        int n,min1,min2,temp,flag=1;
        scanf("%d",&n);
        int vac[n],pat[n];
        for(int i=0;i<n;i++)
        scanf("%d",&vac[i]);
        for(int i=0;i<n;i++)
10
        scanf("%d",&pat[i]);
11
12
        for(int j=0;j<n-1;j++)
13
14
           min1=j,min2=j;
15
           for(int k=j; k<n;k++)
16 .
17
               if(vac[k]<vac[min1])
18
               min1=k:
19
               if(pat[k]<pat[min2])
20
               min2=k:
21
22
            temp=vac[min1];
           vac(min1)=vac[j];
23
24
            vac[j]=temp;
25
26
        for(int i=0;i<n;i++)
27 .
            if(vac[i]<=pat[i])
28
29
30
               flag-0;
31
               break;
32
33
34
        if(flag==1)
35
        printf("Yes");
36
37
38 }
        else
        printf("No");
```

4	Flag question

You are given an array of n integer numbers  $a_1, a_2, \ldots, a_n$ . Calculate the number of pair of indices (i, j) such that  $1 \le i < j \le n$  and  $a_i$  xor  $a_j = 0$ .

## Input format

- First line: n denoting the number of array elements
- Second line: n space separated integers **a**<sub>1</sub>, **a**<sub>2</sub>, . . . , **a**<sub>n</sub>.

### **Output format**

Output the required number of pairs.

### Constraints

- 1 ≤ n ≤ 10<sup>6</sup>
- 1 ≤ a; ≤ 109

# SAMPLE INPUT

5 13143

#### SAMPLE OUTPUT

2

Explanation

The 2 pair of indices are (1, 3) and (2,5).

## Answer: (penalty regime: 0 %)

```
#include<stdio.h>
 2
    int main()
 3 .
        int n, count=0;
 4
        scanf("%d",&n);
        int arr[n];
        for(int i=0;i<n;i++)
        scanf("%d",&arr[i]);
 8
        for(int i=0;i<n-1;i++)
10 +
            for(int j=i+1;j<n;j++)</pre>
11
12 +
                if((arr[i]^arr[j])==0)
13
14
                count++;
15
16
17
        printf("%d",count);
18
```

Question 4	You are given an array A of non-negative integers of size m. Your task is to sort the array in non-decreasing order and print out the original indices of the new sorted array.
Marked out of 1.00	Example:
	A={4,5,3,7,1}
	After sorting the new array becomes A={1,3,4,5,7}.
	The required output should be "4 2 0 1 3"
	INPUT:
	The first line of input consists of the size of the array
	The next line consists of the array of size m
	OUTPUT:
	Output consists of a single line of integers
	CONSTRAINTS:
	1<=m<=106
	0<=A[i]<=106
	NOTE: The indexing of the array starts with 0.
	SAMPLE INPUT
	5
	45371

#### SAMPLE OUTPUT

42013

```
Answer: (penalty regime: 0 %)
```

```
#include<stdio.h>
 2
3 +
    int main()
 4
        int n;
 5
        scanf("%d",&n);
 6
        int arr[n];
 7
        for(int i=0;i<n;i++)
 8
        scanf("%d",&arr[i]);
 9
        int max=arr[0];
10
        for(int i=1;i<n;i++)
11 .
12
            if(arr[i]>max)
13
            max=arr[i];
14
15
        max++;
16
        int min=0;
17
        for (int a=0;a<n;a++)
18 +
19
            for(int b=0;b<n;b++)
20 +
21
                if(arr[b]<arr[min])
22
                min=b;
23
24
            printf("%d ",min);
25
            arr[min]=max;
26
